INDEX BY SUBJECT MATTER 19

ARRANGEMENT OF THE INDEX BY SUBJECT MATTER.

A. *Logical Analysis of Mathematical Disciplines* 19

B. *Algebra.*

B 1. Rational Functions. Theory of Equations. Determinants. Symmetric Functions 20

B 2. Algebraic Forms. Invariants. (Cf. F 2.) 20

B 3. Linear Associative Algebra. Hypercomplex Number Systems. Fields. (Cf. F 1.) 21

B 4. Algebra of Logic 21

C. *Theory of Numbers* 21

(Cf. E 1, E 2.)

D. *Analysis.*

D 1. Functions of Real Variables. Point Sets 22

D 2. Functions of Complex Variables 23

D 3. Particular Functions 24

D 4. Ordinary Differential Equations. (Cf. D 3, F 4.) 24

D 5. Partial Differential Equations 25

D 6. Differential Forms 25

D 7. Calculus of Variations 26

D 8. Difference Equations 27

E. *Groups.*

E 1. Discrete Groups in General. (Cf. E 2.) 27

E 2. Linear Groups in Arbitrary or Special Fields 29

E 3. Continuous Groups. (Cf. E 2, F 1, F 3, G 3.) 30

F. *Geometry.*

F 1. Synthetic Geometry. Non-Euclidian Geometry. Geometry of n Dimensions. Analysis Situs. (Cf. D 1, D 2.) 30

F 2. Algebraic Geometry. Algebraic Curves and Surfaces. (Cf. B 2, D 3, E 2, F 1, F 4, F 5.) 31

F 3. Geometry of Special Space-Elements 32

F 4. Differential Geometry. (Cf. D 6.) 32

F 5. Geometric Transformations. Geometry of Motion. (Cf. E 2.) 33

PAGE.

G. *Applied Mathematics.*

G 1. General Mechanics ... 34
G 2. Celestial Mechanics ... 34
G 3. Elasticity, Hydromechanics and Sound ... 35
G 4. Electricity, Light and Heat ... 35

INDEX BY AUTHORS.

	Vol.*	Pages.
Allen, R. B., On hypercomplex number systems belonging to an arbitrary domain of rationality	9_2	203–218
Allardice, R. E., On the envelope of the axes of a system of conics passing through three fixed points	4_1	103–106
Birkhoff, George D., General mean value and remainder theorems with applications to mechanical differentiation and quadrature	7_1	107–136
—— On the asymptotic character of the solutions of certain differential equations containing a parameter	9_2	219–231
—— Boundary value and expansion problems of ordinary linear differential equations	9_4	373–395
—— Existence and oscillation theorems for a certain boundary value problem	10_2	259–270
—— Singular points of ordinary linear differential equations	10_4	436–470
Blake, E. M., Two plane movements generating quartic scrolls	1_4	421–429
Blichfeldt, H. F., Note on the functions of the form $f(x) \equiv \varphi(x) + a_1x^{n-1} + a_2x^{n-2} + \cdots + a_n$, which in a given interval differ the least possible from zero	2_1	100–102
—— A new determination of the primitive continuous groups in two variables	2_3	249–258
—— On the determination of the distance between two points in space of n dimensions	3_4	467–481
—— On the order of linear homogeneous groups	4_4	387–397
—— On the order of linear homogeneous groups (second paper)	5_3	310–325
—— A theorem concerning the invariants of linear homogeneous groups, with some applications to substitution groups	5_4 6_4	461–466 546
—— On imprimitive linear homogeneous groups	6_2	230–236
—— On the order of linear homogeneous groups (supplement).	7_4	523–529
—— On modular groups isomorphic with a given linear group	8_1	30– 32
Bliss, Gilbert Ames, The second variation of a definite integral when one end-point is variable	3_1	132–141
—— An existence theorem for a differential equation of the second order, with an application to the calculus of variations	5_2	113–125

* The numbers in this column indicate for every paper the volume and part of volume of publication, and thus the date of publication, *e. g.*, the first paper in the list was published in April, 1908, and the second in January, 1903.

In this column references are made also to the *Notes and errata* published in the concluding numbers of various volumes, *e. g.*, a note to the thirteenth paper appears in the *Notes and errata* of volume 6.

—— Sufficient condition for a minimum with respect to one-sided variations.... .... 5_4 477–492
—— A generalization of the notion of angle ..... 7_3 184–196
—— (and M. Mason), A problem in the calculus of variations in which the integrand is discontinuous..... 7_2 325–336
—— A new form of the simplest problem of the calculus of variations..... 8_3 405–414; 8_4 536
—— (and M. Mason), The properties of curves in space which minimize a definite integral ..... 9_4 440–466
Bôcher, Maxime, On regular singular points of linear differential equations of the second order whose coëfficients are not necessarily analytic. .... 1_1 40–52; 1_4 507
—— Application of a method of D'Alembert to the proof of Sturm's theorems of comparison..... 1_4 414–420
—— Certain cases in which the vanishing of the Wronskian is a sufficient condition for linear dependence ..... 2_3 139–149
—— An elementary proof of a theorem of Sturm ..... 2_3 150–151
—— On certain pairs of transcendental functions whose roots separate each other..... 2_4 428–436
—— On the real solutions of systems of two homogeneous linear differential equations of the first order..... 3_2 196–215
—— On the regions of convergence of power-series which represent two-dimensional harmonic functions ..... 10_3 271–278
Bolza, Oskar, The elliptic σ-functions considered as a special case of the hyperelliptic σ-functions .... 1_1 53–65; 2_4 484
—— New proof of a theorem of Osgood's in the calculus of variations..... 2_4 422–427
—— Proof of the sufficiency of Jacobi's condition for a permanent sign of the second variation in the so-called isoperimetric problems..... .... 3_3 305–311
—— A fifth necessary condition for a strong extremum of the integral $\int_{x_1}^{x_0} F(x, y, y')dx$ .... 7_2 314–324
—— Weierstrass's theorem and Kneser's theorem on transversals for the most general case of an extremum of a simple definite integral ..... 7_4 459–488
—— Existence proof for a field of extremals tangent to a given curve..... .... 8_3 399–404
Bromwich, T. J. I'a., Similar conics through three points..... 4_4 489–492
—— The classification of quadrics..... ..... 6_3 275–285
Brown, Ernest William, On the small divisors in the lunar theory .... 3_2 159–185
—— On the formation of the derivatives of the lunar coordinates with respect to the elements..... 4_3 234–248

—— On the variation of the arbitrary and given constants in dynamical equations ... 4_3 333–350
—— On the smaller perturbations of the lunar arguments ... 5_3 279–287, 5_4 551
—— On a general method for treating transmitted motions and its application to indirect perturbations ... 6_3 332–343
BUSSEY, W. H. (and O. VEBLEN), Finite projective geometries ... 7_2 241–259
CAJORI, FLORIAN, Divergent and conditionally convergent series whose product is absolutely convergent ... 2_1 25–36
CAMPBELL, J. E., On the types of linear partial differential equations of the second order in three independent variables which are unaltered by the transformations of a continuous group ... 1_2 243–258, 1_4 509
CARVER, W. B., On the Cayley-Veronese class of configurations 6_4 534–545
CHESSIN, ALEXANDER S., On relative motion ... 1_2 116–169
COBLE, A. B., The quartic curve as related to conics ... 4_1 65–85
—— On the relation between the three-parameter groups of a cubic space curve and a quadric surface ... 7_1 1–20
—— An application of the form-problems associated with certain Cremona groups to the solution of equations of higher degree 9_4 396–424
COLE, F. N., The groups of order p^3q^3 ... 5_2 214–219
COOLIDGE, JULIAN LOWELL, A purely geometric representation of all points in the projective plane ... 1_2 182–192
—— Quadric surfaces in hyperbolic space ... 4_2 161–170
—— The equilong transformations of space ... 9_2 178–182
CURTISS, D. R., Theorems converse to Riemann's on linear differential equations ... 7_1 99–106
DARWIN, G. H., The approximate determination of the form of Maclaurin's spheroid ... 4_2 113–133
—— Further note on Maclaurin's spheroid ... 9_1 34–38
DENTON, WILLIAM WELLS, On the osculating quartic of a plane curve ... 10_3 297–308
DICKSON, LEONARD EUGENE, Definition of the abelian, the two hypoabelian, and related linear groups, as quotient groups of the groups of isomorphisms of certain elementary groups 1_1 30–38
—— A new definition of the general abelian linear group ... 1_1 91–96
—— Determination of an abstract simple group of order $2^7 \cdot 3^6 \cdot 5 \cdot 7$ holoedrically isomorphic with a certain orthogonal group and with a certain hyperabelian group ... 1_3 353–370, 1_4 509
—— Canonical forms of quaternary abelian substitutions in an arbitrary Galois field ... 2_3 103–138, 3_4 499
—— Theory of linear groups in an arbitrary field ... 2_4 363–394, 3_4 500
—— The groups of Steiner in problems of contact ... 3_1 38–45, 3_4 500

—— On the group defined for any given field by the multiplication table of any given finite group ..... 3_3 285–301
—— The groups of Steiner in problems of contact (second paper). 3_5 377–382
—— Definitions of a field by independent postulates..... 4_1 13– 20; 5_4 549–550
—— Definitions of a linear associative algebra by independent postulates ..... 4_1 21– 26
—— On the subgroups of order a power of p in the quaternary abelian group in the Galois field of order p^n..... 4_4 371–386; 5_4 550–551
—— On the reducibility of linear groups..... 4_4 434–436
—— The subgroups of order a power of 2 of the simple quinary orthogonal group in the Galois field of order $p^n = 8l \pm 3$... 5_1 1– 38; 5_4 551
—— Determination of all the subgroups of the known simple group of order 25920 ..... 5_2 126–166; 5_4 551
—— The minimum degree τ of resolvents for the p-section of the periods of hyperelliptic functions of four periods..... 6_1 48– 57
—— Definitions of a group and a field by independent postulates 6_2 198–204; 6_4 547
—— On semi-groups and the general isomorphism between finite groups ..... 6_2 205–208
—— On hypercomplex number systems..... 6_3 344–348
—— On quadratic, hermitian and bilinear forms..... 7_2 275–292
—— Linear algebras in which division is always uniquely possible ..... 7_3 370–390
—— On commutative linear algebras in which division is always uniquely possible..... 7_4 514–522
—— Invariants of binary forms under modular transformations 8_2 205–232; 8_4 535
—— Modular theory of group-matrices..... 8_3 389–398
—— Representations of the general symmetric group as linear groups in finite and infinite fields..... 9_2 121–148
—— Definite forms in a finite field..... 10_1 109–122
—— General theory of modular invariants..... 10_2 123–158
—— Equivalence of pairs of bilinear or quadratic forms under rational transformations..... 10_3 347–360
DRESDEN, ARNOLD, The second derivatives of the extremal integral. 9_4 467–486
EIESLAND, JOHN, On a certain system of conjugate lines on a surface connected with Euler's transformation ..... 6_4 450–471
EISENHART, LUTHER PFAHLER, Conjugate rectilinear congruences. 3_3 354–371
—— Congruences of curves..... 4_4 470–488
—— Three particular systems of lines on a surface ..... 5_4 421–437
—— Surfaces of constant curvature and their transformations.. 6_4 472–485
—— Applicable surfaces with asymptotic lines of one surface corresponding to a conjugate system of another.. ..... 8_1 113–134; 8_4 535

—— Surfaces with isothermal representation of their lines of curvature and their transformations ..... 9_2 149–177
EMCH, ARNOLD, Algebraic transformations of a complex variable realized by linkages ..... 3_4 493–498
EPSTEEN, SAUL, On reducible groups ..... 4_3 249–250
—— Semireducible hypercomplex number systems ..... 4_4 437–444; 5_4 551
—— On the definition of reducible hypercomplex number systems. 5_1 105–109
—— (and J. H. MACLAGAN-WEDDERBURN), On the structure of hypercomplex number systems ..... 6_2 172–178
FIELD, PETER, On the form of a plane quintic curve with five cusps ..... 7_1 26– 32
FIELDS, J. C., On the reduction of the general abelian integral.. 2_1 49– 86; 2_4 486
FINDLAY, WILLIAM, The Sylow subgroups of the symmetric group ..... 5_2 263–278
FITE, W. B., On metabelian groups ..... 3_3 331–353
—— Groups whose orders are powers of a prime ..... 7_1 61– 68
—— Irreducible linear homogeneous groups whose orders are powers of a prime ..... 8_1 107–112
—— Irreducible homogeneous linear groups in an arbitrary domain ..... 10_3 315–318
FORD, W. B., On the possibility of differentiating term by term the developments for an arbitrary function of one real variable in terms of Bessel functions ..... 4_2 178–184
—— On the analytic extension of functions defined by double power series ..... 7_2 260–274
—— On the integration of the homogeneous linear difference equation of second order ..... 10_3 319–336
FRÉCHET, M., Sur les opérations linéaires ..... 5_4 493–499
—— Sur les opérations linéaires (deuxième note) ..... 6_3 134–140
—— Sur l'écart de deux courbes et sur les courbes limites ..... 6_4 435–449
—— Sur les opérations linéaires (troisième note) ..... 8_4 433–446
GALE, ARTHUR SULLIVAN, On the rank, order and class of algebraic minimum curves ..... 3_4 451–466
GLENN, O. E., Determination of the abstract groups of order p^2qr ; p, q, r being distinct primes ..... 7_1 137–151
GORDAN, PAUL, Formentheoretische Entwickelung der in Herrn White's Abhandlung über Curven dritter Ordnung enthaltenen Sätze ..... 1_1 9– 13
—— Die Hessische und die Cayley'sche Curve ..... 1_4 402–413
GOURSAT, E., Sur la définition générale des fonctions analytiques, d'après Cauchy ..... 1_1 14– 16
—— A simple proof of a theorem in the calculus of variations... 5_1 110–112

GREENHILL, ALFRED GEORGE, The elliptic integral in electromagnetic theory ..... 8_4 447–534
GRIFFIN, FRANK LOXLEY, Certain periodic orbits of k finite bodies revolving about a relatively large central mass ..... 9_1 1– 33
HADAMARD, J., La théorie des plaques élastiques planes ..... 3_4 401–422
HARTWELL, GEORGE WILBUR, Plane fields of force whose trajectories are invariant under a projective group ..... 10_2 220–246
HASKELL, M. W., The resolution of any collineation into perspective reflections ..... 7_3 361–369
HASKINS, CHARLES NELSON, On the invariants of quadratic differential forms ..... 3_1 71– 91; 3_4 501
—— On the invariants of differential forms of degree higher than two ..... 4_1 38– 43
—— On the invariants of quadratic differential forms, II ..... 5_2 167–192
—— Note on the differential invariants of a surface in space 7 152–154
—— On the differential invariants of a plane ..... 7_4 588–590
HATHAWAY, A. S., Quaternion space ..... 3_1 46– 59
HAWKES, H. E., On hypercomplex number systems ..... 3_3 312–330
HEDRICK, E. R., On derivatives over assemblages ..... 8_3 345–353
HEFFTER, L., Ueber Curvenintegrale im m-dimensionalen Raum 4_2 142–148
HILBERT, DAVID, Ueber Flächen von constanter Gauss'scher Krümmung ..... 2_1 87– 99
HILL, G. W., On the extension of Delaunay's method in the lunar theory to the general problem of planetary motion ..... 1_2 205–242; 1_4 508–509
HUN, JOHN GALE, On certain invariants of two triangles ..... 5_1 39– 55
HUNTINGTON, EDWARD V., A complete set of postulates for the theory of absolute continuous magnitude ..... 3_2 264–279; 5_4 549
—— Complete sets of postulates for the theories of positive integral and of positive rational numbers ..... 3_2 280–284
—— Two definitions of an abelian group by sets of independent postulates ..... 4_1 27– 30
—— Definitions of a field by sets of independent postulates ..... 4_1 31– 37
—— Complete sets of postulates for the theory of real quantities 4_3 358–370
—— Sets of independent postulates for the algebra of logic ..... 5_3 288–309; 5_4 552
—— A set of postulates for real algebra, comprising postulates for a one-dimensional continuum and for the theory of groups ..... 6_1 17– 41; 6_4 546
—— Note on the definition of abstract groups by sets of independent postulates ..... 6_2 181–197; 7_4 591
—— A set of postulates for ordinary complex algebra 6 209–229
HUTCHINSON, J. I., On certain relations among the theta constants ..... 1_4 391–394
—— On a class of automorphic functions ..... 3_1 1– 11

—— On the automorphic functions of the group (0, 3; 2, 6, 6) 5_4 447–460
—— On certain hyperabelian functions which are expressible by theta series 7_1 21– 25
—— On automorphic groups whose coefficients are integers in a quadratic field 7_4 530–536
—— A method for constructing the fundamental region of a discontinuous group of linear transformations 8_2 261–269
—— The hypergeometric functions of N variables 10_1 61– 70
JACKSON, DUNHAM, Resolution into involutory substitutions of the transformations of a non-singular bilinear form into itself 10_4 479–484
KASNER, EDWARD, The invariant theory of the inversion group; geometry upon a quadric surface 1_4 430–498, 2_4 485
—— The cogredient and digredient theories of multiple binary forms 4_1 86–102
—— The generalized Beltrami problem concerning geodesic representation 4_3 149–152, 5_4 550
—— On the point-line as element of space: a study of the corresponding bilinear connex 4_3 213–233, 5_4 550
—— Isothermal systems of geodesics 5_1 56– 60
—— Surfaces whose geodesics may be represented in the plane by parabolas 6_2 141–158
—— The problem of partial geodesic representation 7_2 200–206
—— The trajectories of dynamics 7_3 401–424
—— Dynamical trajectories: the motion of a particle in an arbitrary field of force 8_2 135–158
—— Natural families of trajectories: conservative fields of force 10_2 201–219, 10_4 510
KELLOGG, O. D., Potential functions on the boundary of their regions of definition 9_1 39– 50
—— Double distributions and the Dirichlet problem 9_1 51– 66
KRAUSE, MARTIN, Ueber Systeme von Differentialgleichungen denen vierfach periodische Functionen Genüge leisten 1_3 287–292
LANDRY, AUBREY E., A geometrical application of binary syzygies 10_1 95–108
LEHMER, D. N., Constructive theory of the unicursal cubic by synthetic methods 3_3 372–376
LEIB, DAVID D., On a complete system of invariants of two triangles 10_3 361–390
LENNES, N. J., Volumes and areas 6_4 486–490
LEVI, BEPPO, Geometrie proiettive di congruenza e geometrie proiettive finite 8_3 354–365
LOEWY, ALFRED, Ueber die Reducibilität der Gruppen linearer homogener Substitutionen 4_1 44– 64

—— Ueber die Reducibilität der reellen Gruppen linearer homogener Substitutionen..... 4, 171–177
—— Zur Gruppentheorie mit Anwendungen auf der Theorie der linearen homogenen Differentialgleichungen..... 5, 61– 80
—— Ueber die vollständig reduciblen Gruppen, die zu einer Gruppe linearer homogener Substitutionen gehören..... 6, 504–533
LONGLEY, WILLIAM RAYMOND, A class of periodic orbits of an infinitesimal body subject to the attraction of n finite bodies { 8, 159–188; 8, 535
LOUD, FRANK H., Sundry metric theorems concerning n lines in a plane..... 1, 323–338
LOVETT, E. O., On a problem including that of several bodies and admitting of an additional integral..... 6, 491–495
MACAULAY, F. S., On a method of dealing with the intersections of plane curves..... 5, 385–410
MACLAGAN-WEDDERBURN, J. H. (and S. EPSTEEN), On the structure of hypercomplex number systems..... 6 172–178
—— A theorem on finite algebras..... 6 349–352
—— (and O. VEBLEN), Non-desarguesian and non-pascalian geometries..... 8, 379–388
MCCLINTOCK, E., On the nature and use of the functions employed in the recognition of quadratric residues..... 3, 92–109
MCDONALD, J. H., On the system of a binary cubic and quadratic and the reduction of hyperelliptic integrals of genus two to elliptic integrals by a transformation of the fourth order..... 2, 437–458
—— A problem in the reduction of hyperelliptic integrals..... 7, 578–587
MANNING, W. A., The primitive groups of class $2p$ which contain a substitution of order p and degree $2p$..... 4, 351–357
—— On the primitive groups of class $3p$..... 6, 42– 47
—— Groups in which a large number of operators may correspond to their inverses..... 7, 233–240
—— On multiply transitive groups..... 7, 499–508
—— On the order of primitive groups..... 10, 247–258
MASCHKE, HEINRICH, Note on the unilateral surface of Moebius. 1, 39
—— A new method of determining the differential parameters and invariants of quadratic differential quantics..... { 1, 197–204; 1, 508
—— On superosculating quadric surfaces..... 3, 482–484
—— A symbolic treatment of the theory of invariants of quadratic differential quantics of n variables..... 4, 445–469
—— Differential parameters of the first order..... { 7, 69– 80; 7, 591
—— The Kronecker-Gaussian curvature of hyperspace..... 7 81– 93
MASON, MAX, Green's theorem and Green's functions for certain systems of differential equations..... 5, 220–225
—— The doubly periodic solutions of Poisson's equation in two independent variables..... 6, 159–164

—— (and G. A. Bliss), A problem in the calculus of variations in which the integrand is discontinuous..... 7, 325–336
—— On the boundary value problems of linear ordinary differential equations of second order..... 7, 337–360
—— The expansion of a function in terms of normal functions.. 8, 427–432
—— (and G. A. Bliss), The properties of curves in space which minimize a definite integral..... 9, 440–466
Merrill, Helen A., On solutions of differential equations which possess an oscillation theorem..... 4, 423–433; 5, 551
Mertens, F., Zur linearen Transformation der θ-Reihen..... 2, 331-342
Metzler, W. H., On certain aggregates of determinant minors.. 2, 395–403
Miller, G. A., On the groups which are the direct products of two subgroups..... 1, 66– 71
—— On the groups which have the same group of isomorphisms 1, 395–401
—— Determination of all the groups of order p^m which contain the abelian group of type $(m-2, 1)$, p being any prime.... 2, 259–272; 3, 499–500
—— On the groups of order p^m which contain operators of order p^{m-2}..... 3, 383–387
—— On the holomorph of a cyclic group..... 4, 153–160
——(and H. C. Moreno), Non-abelian groups in which every sub-group is abelian..... 4, 398–404
—— Determination of all the groups of order 2^m which contain an odd number of cyclic subgroups of composite order..... 6, 58– 62
—— On the invariant subgroups of prime index..... 6, 326–331
—— Groups containing only three operators which are squares.. 7, 94– 98
—— The groups of order p^m which contain exactly p cyclic subgroups of order p^a..... 7, 228–232
—— Generalization of the groups of genus zero..... 8, 1– 13; 10, 510
—— The groups in which every subgroup is either abelian or hamiltonian..... 8, 25– 29
—— Groups defined by the orders of two generators and the order of their commutator..... 9, 67– 78
—— On the holomorph of the cyclic group of order p^m..... 9, 232–236
—— The central of a group..... 10, 50– 60
—— Automorphisms of order two..... 10, 471–478
Moore, Charles N., On the introduction of convergence factors into summable series and summable integrals..... 8, 299–330; 8, 535
—— The summability of the developments in Bessel functions, with applications..... 10, 391–435
Moore, Eliakim Hastings, On certain crinkly curves..... 1, 72– 90; 1, 507
—— A simple proof of the fundamental Cauchy-Goursat theorem. 1, 499–506; 2, 486

—— Concerning Harnack's theory of improper definite integrals.. 2_3 296–330; 2_4 487
—— On the theory of improper definite integrals..... 2_4 459–475
—— On the projective axioms of geometry..... 3_1 142–158; 3_4 501
—— A definition of abstract groups..... 3_4 485–492; 5_4 549
—— On a definition of abstract groups..... 6_2 179–180
MOORE, ROBERT L., Geometry in which the sum of the angles of every triangle is two right angles..... 8_3 369–378
—— Sets of metrical hypotheses for geometry..... 9_4 487–512
MORENO, H. C. (and G. A. MILLER), Non-abelian groups in which every sub-group is abelian..... 4_4 398–404
MORLEY, FRANK, On the metric geometry of the plane n-line.... 1_2 97–115
—— Orthocentric properties of the plane n-line..... 4_1 1– 12
—— Projective coördinates..... 4_3 288–296
—— On the geometry whose element is the 3-point of a plane... 5_4 467–476
—— On reflexive geometry..... 8_1 14– 24
MORRIS, R., On the automorphic functions of the group $(0, 3; l_1, l_2, l_3)$..... 7_3 425–448
MOULTON, FOREST RAY, On a class of particular solutions of the problem of four bodies..... 1_1 17– 29; 3_4 499; 5_4 549
—— A simple non-desarguesian plane geometry..... 3_2 192–195
—— A class of periodic solutions of the problem of three bodies with application to the lunar theory..... 7_4 537–577
NEIKIRK, L. I., Groups of order p^m, which contain cyclic sub-groups of order p^{m-3}..... 6_3 316–325
OSGOOD, W. F., On the existence of the Green's function for the most general simply connected plane region..... 1_3 310–314; 2_4 484–485
—— On the existence of a minimum of the integral

$$\int_{x_0}^{x_1} F(x, y, y')dx$$

when x_0 and x_1 are conjugated points, and the geodesics on an ellipsoid of revolution: a revision of a theorem of Kneser's..... 2_2 166–182
—— On a fundamental property of a minimum in the calculus of variations and the proof of a theorem of Weierstrass's... 2_3 273–295; 2_4 486; 3_4 500
—— A Jordan curve of positive area..... 4_1 107–112
—— On Cantor's theorem concerning the coefficients of a convergent trigonometric series, with generalizations..... 10_3 337–346
PEIRCE, J. M., On certain complete systems of quaternion expressions, and on the removal of metric limitations from the calculus of quaternions..... 5_4 411–420

PELL, ALEXANDER, "D" lines on quadrics..... 1, 315–322

—— The square root and the relations of order..... 7 197–199
VEBLEN, O. (and J. H. MACLAGAN-WEDDERBURN). Non-desarguesian and non-pascalian geometries..... 8 379–388

B. ALGEBRA.

B 1. Rational functions. Theory of Equations. Determinants. Symmetric Functions.

COBLE, A. B., An application of the form-problems associated with certain Cremona groups to the solution of equations of higher degree..... 9 396–424
METZLER, W. H., On certain aggregates of determinant minors 2 395–403
ROE, JR., E. D., On the coefficients in the product of an alternant and a symmetric function..... 5 193–213; 6 546–547
—— On the coefficients in the quotient of two alternants..... 6 63–74; 6 546

B 2. *Algebraic Forms.*

(Cf. F 2.)

DICKSON, L. E., On quadratic, hermitian, and bilinear forms..... 7 275–292
—— Invariants of binary forms under modular transformations.. 8 205–232; 8 535
—— Definite forms in a finite field..... 10 109–122
—— General theory of modular invariants..... 10 123–158
—— Equivalence of pairs of bilinear or quadratic forms under rational transformations..... 10 347–360
GORDAN, PAUL, Formentheoretische Entwickelung der in Herrn White's Abhandlung über Curven dritter Ordnung enthaltenen Sätze..... 1 9–13
—— Die Hessische und die Cayley'sche Curve..... 1 402–413
KASNER, EDWARD, The invariant theory of the inversion group; geometry upon a quadric surface..... 1 430–498; 2 485
—— The cogredient and disgredient theories of multiple binary forms..... 4 86–102
LANDRY, A. E., A geometrical application of binary syzygies..... 10 95–108
LEIB, DAVID D., On a complete system of invariants of two triangles..... 10 361–390
MCDONALD, J. H., On the system of a binary cubic and quadratic and the reduction of hyperelliptic integrals of genus two to elliptic integrals by a transformation of the fourth order..... 2 437–458

SMITH, PERCEY F., On the linear transformations of a quadratic form into itself 6 1– 16
STORY, WILLIAM EDWARD, Denumerants of double differentiants. 8 33– 70

B 3. *Linear Associative Algebra. Hypercomplex Number Systems. Fields.* (Cf. F 1.)

ALLEN, R. B., On hypercomplex number systems belonging to an arbitrary domain of rationality 9 203–218
DICKSON, LEONARD EUGENE, Definition of a field by independent postulates 4 13– 20; 5 549–550
—— Definitions of a linear associative algebra by independent postulates 4 21– 26
—— On hypercomplex number systems 6 344–348
—— Linear algebras in which division is always uniquely possible 7 370–390
—— On commutative linear algebras in which division is always uniquely possible 7 514–522
EPSTEEN, SAUL, Semireducible hypercomplex number systems 4 437–444; 5 551
—— On the definition of reducible hypercomplex number systems 5 105–109
—— (and J. H. MACLAGAN-WEDDERBURN), On the structure of hypercomplex number systems 6 172–178
HAWKES, H. E., On hypercomplex number systems 3 312–330
HUNTINGTON, EDWARD V., Definitions of a field by sets of independent postulates 4 31– 37
MACLAGAN-WEDDERBURN, J. H. (and S. EPSTEEN), On the structure of hypercomplex number systems 6 172–178
—— A theorem on finite algebras 6 349–352
PEIRCE, J. M., On certain complete systems of quaternion expressions, and on the removal of metric limitations from the calculus of quaternions 5 411–420
SHAW, JAMES BYRNIE, Theory of linear associative algebra 4 251–287
—— On nilpotent algebras 4 405–422
—— Algebras defined by finite groups 5 326–342; 5 552
STRONG, WENDELL M., Note on non-quaternion number systems 2 43– 48
TABER, H., On hypercomplex number systems (first paper) 5 509–548

B 4. *Algebra of Logic.*

HUNTINGTON, EDWARD V., Sets of independent postulates for the algebra of logic 5 288–309; 5 552

C. THEORY OF NUMBERS.

(Cf. E 1, E 2.)

HUNTINGTON, EDWARD V., Complete sets of postulates for the theories of positive integral and of positive rational numbers 3 280–284

McClintock, E., On the nature and use of the functions employed in the recognition of quadratic residues..... 3 92–109
Westlund, J., On the class number of the cyclotomic number field $k(e^{2\pi i/p^n})$ 4 201–212

D. Analysis.

D 1. *Functions of Real Variables. Point Sets.*

Birkhoff, G. D., General mean value and remainder theorems with applications to mechanical differentiation and quadrature 7 107–136
Blichfeldt, H. F., Note on the functions of the form

$$f(x) \equiv \varphi(x) + a_1 x^{n-1} + a_2 x^{n-2} + \cdots + a_n,$$

which in a given interval differ the least possible from zero. 2 100–102
Bôcher, Maxime, Certain cases in which the vanishing of the Wronskian is a sufficient condition for linear dependence... 2 139–149
—— On the regions of convergence of power-series which represent two-dimensional harmonic functions..... 10 271–278
Cajori, Florian, Divergent and conditionally convergent series whose product is absolutely convergent 2 25– 36
Fréchet, Maurice, Sur les opérations linéaires 5 493–499
—— Sur les opérations linéaires (deuxième note)..... 6 134–140
—— Sur l'écart de deux courbes et sur les courbes limites..... 6 435–449
—— Sur les opérations linéaires (troisième note)..... 8 433–446
Hedrick, E. R., On derivatives over assemblages..... 8 345–353
Heffter, L., Ueber Curvenintegrale in m-dimensionalen Raum. 4 142–148
Huntington, Edward V., A complete set of postulates for the theory of absolute continuous magnitude 3 264–279; 5 349
—— Complete sets of postulates for the theory of real quantities. 4 358–370
Moore, Eliakim Hastings, On certain crinkly curves..... 1 72– 90; 1 507
—— Concerning Harnack's theory of improper definite integrals..... 2 296–330; 2 487
—— On the theory of improper definite integrals..... 2 459–475
Osgood, W. F. A., A Jordan curve of positive area..... 4 107–112
—— On Cantor's theorem concerning the coefficients of a convergent trigonometric series, with generalizations..... 10 337–346
Pierpont, James, On multiple integrals..... 6 416–434
—— On improper multiple integrals..... 7 155–174
—— Area of curved surfaces..... 7 489–498
Pringsheim, A., Ueber die Anwendung der Cauchy'schen Multiplicationsregel auf bedingt convergente oder divergente Reihen..... 2 404–412
Richardson, R. G. D., Improper multiple integrals..... 7 449–458

—— The integration of a sequence of functions and its application to iterated integrals 9 339–372
Smith, Clara E., A theorem of Abel and its application to the development of a function in terms of Bessel's functions..... 8 92–106
Stolz, O., Zur Erklärung der Bogenlänge und des Inhaltes einer krummen Fläche..... 3 23– 37; 3 500
—— Nachtrag zum Artikel: "Zur Erklärung der Bogenlänge, u. s. w." (dieses Bandes, S. 23 f.) 3 302–304
Van Vleck, E. B., A proof of some theorems on pointwise discontinuous functions..... 8 189–204
—— On non-measurable sets of points, with an example..... 9 237–244
Veblen, Oswald, Definition in terms of order alone in the linear continuum and in well-ordered sets..... 6 165–171
—— Continuous increasing functions of finite and transfinite ordinals..... 9 280–292
Young, J. W., General theory of approximation by functions involving a given number of arbitrary parameters..... 8 331–344

D 2. *Functions of Complex Variables.*

Emch, Arnold, Algebraic transformations of a complex variable realized by linkages..... 3 493–498
Ford, W. B., On the analytic extension of functions defined by double power series..... 7 260–274
Goursat, E., Sur la définition générale des fonctions analytiques, d'après Cauchy 1 14– 16
Moore, Charles N., On the introduction of convergence factors into summable series and summable integrals..... 8 299–330; 8 535
Moore, Eliakim Hastings, A simple proof of the fundamental Cauchy-Goursat theorem..... 1 499–506; 2 486
Osgood, W. F., On the existence of the Green's function for the most general simply connected plane region..... 1 310–314; 2 484–485
Pringsheim, A., Ueber den Goursat'schen Beweis des Cauchy'schen Integralsatzes... ..... 2 413–421
Van Vleck, Edward B., On linear criteria for the determination of the radius of convergence of a power series..... .. 1 293–309; 1 509
—— On the convergence of continued fractions with complex elements 2 215–233; 2 486
—— On the convergence and character of the continued fraction $\frac{a_1 z}{1} + \frac{a_2 z}{1} + \frac{a_3 z}{1} + \cdots$ 2 476–483
—— On an extension of the 1894 memoir of Stieltjes..... 4 297–332
—— On the convergence of algebraic continued fractions whose coefficients have limiting values..... 5 253–262

D 3. *Particular Functions.*

BOLZA, OSKAR, The elliptic σ-functions considered as a special case of the hyperelliptic σ-functions 1 53–65; 2 484

DICKSON, L. E., The minimum degree τ of resolvents for the p-section of the periods of hyperelliptic functions of two periods. 6 48–57

FIELDS, J. C., On the reduction of the general abelian integral .. 2 49–86; 2 486

FORD, W. B., On the possibility of differentiating term by term the developments for an arbitrary function of one real variable in terms of Bessel functions 4 178–184

GREENHILL, ALFRED GEORGE, The elliptic integral in electromagnetic theory 8 447–534

HUTCHINSON, J. I., On certain relations among the theta constants 1 391–394

—— On a class of automorphic functions 3 1–11

—— On the automorphic functions of the group (0, 3 ; 2, 6, 6) .. 5 447–460

—— On certain hyperabelian functions which are expressible by theta series 7 21–25

—— The hypergeometric functions of n variables 10 61–70

MCDONALD, J. H., On the system of a binary cubic and quadratic and the reduction of hyperelliptic integrals of genus two to elliptic integrals by a transformation of the fourth order .... 2_4 437–458

MERTENS, F., Zur linearen Transformation der θ-Reihen..... 2_3 331–342

VAN VLECK, EDWARD B., A determination of the number of real and imaginary roots of the hypergeometric series ..... 3_1 110–131; 3_4 501

YOUNG, JOHN WESLEY, On the group of sign (0, 3; 2, 4, ∞) and the functions belonging to it..... 5_1 81–104

D4. *Ordinary Differential Equations.*

(Cf. D3, F4.)

BLISS, GILBERT AMES, An existence theorem for a differential equation of the second order, with an application to the calculus of variations .... 5_2 113–125

BÔCHER, MAXIME, On regular singular points of linear differential equations of the second order whose coefficients are not necessarily analytic..... 1_1 40–52; 1_4 507

—— Application of a method of D'Alembert to the proof of Sturm's theorems of comparison..... ..... 1_4 414–420

—— An elementary proof of a theorem of Sturm..... 2_2 150–151

—— On certain pairs of transcendental functions whose roots separate each other..... ..... 2_4 428–436

—— On the real solutions of systems of two homogeneous linear differential equations of the first order..... 3_2 196–215

LOEWY, ALFRED, Zur Gruppentheorie mit Anwendungen auf die Theorie der linearen homogenen Differentialgleichungen..... 5_1 61–80

MERRILL, HELEN A., On solutions of differential equations which possess an oscillation theorem ..... 4_4 423–433; 5_4 551

WILCZYNSKI, E. J., Invariants of systems of linear differential equations ..... 2_1 1–24; 2_4 486

—— Covariants of systems of linear differential equations and applications to the theory of ruled surfaces..... 3, 423–450

D 5. *Partial Differential Equations.*

CAMPBELL, J. E., On the types of linear partial differential equations of the second order in three independent variables which are unaltered by the transformations of a continuous group..... 1, 243–258; 1, 509
MASON, MAX, Green's theorem and Green's functions for certain systems of differential equations..... 5, 220–225

D 6. *Differential Forms.*

HASKINS, CHARLES NELSON, On the invariants of quadratic differential forms..... 3, 71–91; 3, 501
—— On the invariants of differential forms of degree higher than two..... 4, 38–43
—— On the invariants of quadratic differential forms, II..... 5, 167–192
MASCHKE, HEINRICH, A new method of determining the differential parameters and invariants of quadratic differential quantics..... 1, 197–204; 1, 508
—— A symbolic treatment of the theory of invariants of quadratic differential quantics of n variables..... 4, 445–469

D 7. *Calculus of Variations.*

BLISS, GILBERT AMES, The second variation of a definite integral when one end-point is variable 3, 132–141
—— An existence theorem for a differential equation of the second order, with an application to the calculus of variations 5, 113–125
—— Sufficient condition for a minimum with respect to one-sided variations..... 5, 447–492
BOLZA, O., New proof of a theorem of Osgood's in the calculus of variations..... 2, 422–427
—— Proof of the sufficiency of Jacobi's condition for a permanent sign of the second variation in the so-called isoperimetric problems 3, 305–311
GOURSAT, E., A simple proof of a theorem in the calculus of variations..... 5, 110–112
OSGOOD, W. F., On the existence of a minimum of the integral

$$\int_{x_0}^{x_1} F(x, y, y')dx$$

when x_0 and x_1 are conjugate points, and the geodesics on an ellipsoid of revolution : a revison of a theorem of Kneser's 2, 166–182
—— On a fundamental property of a minimum in the calculus of variations and the proof of a theorem of Weierstrass's..... 2, 273–295; 2, 486; 3, 500

E. Groups.

E1. *Groups in General. Groups of Finite Order.*

(Cf. E2.)

Cole, F. N., The groups of order p^5q^8 ..... 5_2 214–219

Dickson, Leonard Eugene, Determination of all the subgroups of the known simple group of order 25920 ..... 5_2 126–166; 5_4 551

INDEX BY NUMBERS.

VOLUME 1, NUMBER 1. JANUARY, 1900.

	PAGES.	CLASS.
Conics and cubics connected with a plane cubic by certain covariant relations. By HENRY S. WHITE, of Evanston, Ill.	1– 8	F 2
Formentheoretische Entwickelung der in Herrn White's Abhandlung über Curven dritter Ordnung enthaltenen Sätze. By PAUL GORDAN, of Erlangen, Germany.	9– 13	B 2
Sur la définition générale des fonctions analytiques, d'après Cauchy. By E. GOURSAT, of Paris, France.	14– 16	D 2
On a class of particular solutions of the problem of four bodies. By FOREST RAY MOULTON, of Chicago, Ill.	17– 29	G 2
Definition of the abelian, the two hypoabelian, and related linear groups as quotient-groups of the groups of isomorphisms of certain elementary groups. By LEONARD EUGENE DICKSON, of Austin, Tex.	30– 38	E 2
Note on the unilateral surface of Moebius. By HEINRICH MASCHKE, of Chicago, Ill.	39	F 1
On regular singular points of linear differential equations of the second order whose coefficients are not necessarily analytic. By MAXIME BÔCHER, of Cambridge, Mass.	40– 52	D 4
The elliptic σ-functions considered as a special case of the hyperelliptic σ-functions. By OSKAR BOLZA, of Chicago, Ill.	53– 65	D 3
On the groups which are the direct products of two subgroups. By G. A. MILLER, of Ithaca, N. Y.	66– 71	E 1
On certain crinkly curves. By ELIAKIM HASTINGS MOORE, of Chicago, Ill.	72– 90	D 1
A new definition of the general abelian linear group. By LEONARD EUGENE DICKSON, of Austin, Tex.	91– 96	E 2

VOLUME 1, NUMBER 2. APRIL, 1900.

On the metric geometry of the plane n-line. By F. MORLEY, of Haverford, Pa.	97–115	F 2
On relative motion. By ALEXANDER S. CHESSIN, of New York, N. Y.	116–169	G 1
Plane cubics and irrational covariant cubics. By HENRY S. WHITE, of Evanston, Ill.	170–181	F 2

A purely geometric representation of all points in the projective plane. By JULIAN LOWELL COOLIDGE, of Cambridge, Mass ..... 182–192 F 1

The decomposition of the general collineation of space into three skew reflections. By EDWIN B. WILSON, of New Haven, Conn..... 193–196 F 5

A new method of determining the differential parameters and invariants of quadratic differential quantics. By HEINRICH MASCHKE, of Chicago, Ill..... 197–204 D 6

On the extension of Delaunay's method in the lunar theory to the general problem of planetary motion. By G. W. HILL, of West Nyack, N. Y..... 205–242 G 2

On the types of linear partial differential equations of the second order in three independent variables which are unaltered by the transformations of a continuous group. By J. E. Campbell, of Oxford, England..... 243–258 D 5, E 3

VOLUME 1, NUMBER 3. JULY, 1900.

Wave propagation over non-uniform electrical conductors. By M. I. PUPIN, of New York, N. Y..... 259–286 G 4

Ueber Systeme von Differentialgleichungen denen vierfach periodische Functionen Genüge leisten. By MARTIN KRAUSE, of Dresden, Germany..... 287–292 D 3

On linear criteria for the determination of the radius of convergence of a power series. By EDWARD B. VAN VLECK, of Middletown, Conn..... 293–309 D 2

On the existence of the Green's function for the most general simply connected plane region. By W. F. OSGOOD, of Cambridge, Mass..... 310–314 D 2

"D" lines on quadrics. By ALEXANDER PELL, of Vermillion, S. D. ..... 315–322 F 4

Sundry metric theorems concerning n-lines in a plane. By FRANK H. LOUD, of Haverford, Pa..... 323–338 F 2

An application of group theory to hydrodynamics. By E. J. WILCZYNSKI, of Berkeley, Cal..... 339–352 G 3

Determination of an abstract simple group of order $2^7 \cdot 3^6 \cdot 5 \cdot 7$ holoedrically isomorphic with a certain orthogonal group and with a certain hyperabelian group. By LEONARD EUGENE DICKSON, Austin, Texas. 353–370 E 2

VOLUME 1, NUMBER 4. OCTOBER, 1900.

On surfaces enveloped by spheres belonging to a linear spherical complex. By PERCEY F. SMITH, of New Haven, Conn. ..... 371–390 F 3

On certain relations among the theta constants. By J. I. HUTCHINSON, of Ithaca, N. Y. ..... 391–394 D 3
On the groups which have the same group of isomorphisms. By G. A. MILLER, of Ithaca, N. Y. ..... 395–401 E 1
Die Hessische und die Cayley'sche Curve. By PAUL GORDAN, of Erlangen, Germany ..... 402–413 B 2
Application of a method of D'Alembert to the proof of Sturm's theorems of comparison. By MAXIME BÔCHER, of Cambridge, Mass. ..... 414–420 D 4
Two plane movements generating quartic scrolls. By E. M. BLAKE, of Ithaca, N. Y. ..... 421–429 F 5
The invariant theory of the inversion group: geometry upon a quadric surface. By EDWARD KASNER, of New York, N. Y. ..... 430–498 B 2
A simple proof of the fundamental Cauchy-Goursat theorem. By ELIAKIM HASTINGS MOORE, of Chicago, Ill. ..... 499–506 D 2
Notes and errata: volume 1 507–509

VOLUME 2, NUMBER 1. JANUARY, 1901.

Invariants of systems of linear differential equations. By E. J. WILCZYNSKI, of Berkeley, Cal. ..... 1– 24 D 4
Divergent and conditionally convergent series whose product is absolutely convergent. By FLORIAN CAJORI, of Colorado Springs, Col. ..... 25– 36 D 1
Sets of coincidence points on the non-singular cubics of a syzygetic sheaf. By M. B. PORTER, of New Haven, Conn. ..... 37– 42 F 2
Note on non-quaternion number systems. By WENDELL M. STRONG, of New Haven, Conn. ..... 43– 48 B 3
On the reduction of the general abelian integral. By J. C. FIELDS, of Hamilton, Ont. ..... 49– 86 D 3
Ueber Flächen von constanter Gaussscher Krümmung. By DAVID HILBERT, of Göttingen, Germany ..... 87– 99 F 4
Note on the functions of the form
$$f(x) \equiv \varphi(x) + a_1 x^{n-1} + a_2 x^{n-2} + \cdots + a_n$$
which in a given interval differ the least possible from zero. By H. F. BLICHFELDT, of Stanford University, Cal. ..... 100–102 D 1

VOLUME 2, NUMBER 2. APRIL, 1901.

Canonical forms of quaternary abelian substitutions in an arbitrary Galois field. By LEONARD EUGENE DICKSON, of Chicago, Ill. ..... 103–138 E 2

Certain cases in which the vanishing of the Wronskian is a sufficient condition for linear dependence. By MAXIME BÔCHER, of Cambridge, Mass ..... 139–149 D 1

An elementary proof of a theorem of Sturm. By MAXIME BÔCHER, of Cambridge, Mass..... 150–151 D 4

On the determination of surfaces capable of conformal representation upon the plane in such a manner that geodetic lines are represented by algebraic curves. By HENRY FREEMAN STECKER, of Göttingen, Germany... 152–165 F 4

On the existence of a minimum of the integral

$$\int_{x_0}^{x_1} F(x, y, y')dx$$

when x_0 and x_1 are conjugate points, and the geodesics on an ellipsoid of revolution : a revision of a theorem of Kneser's. By W. F. OSGOOD, of Cambridge, Mass. 166–182 D 7

On the geometry of planes in a parabolic space of four dimensions. By IRVING STRINGHAM, of Berkeley, Cal. 183–214 F 1

VOLUME 2, NUMBER 3. JULY, 1901.

On the convergence of continued fractions with complex elements. By E. B. VAN VLECK, of Middletown, Conn. 215–233 D 2

Geometry within a linear spherical complex. By PERCEY F. SMITH, of New Haven, Conn ..... 234–248 F 3

A new determination of the primitive continuous groups in two variables. By H. F. BLICHFELDT, of Stanford University, Cal..... 249–258 E 3

Determination of all the groups of order p^m which contain the abelian group of type $(m-2, 1)$, p being any prime. By G. A. MILLER, of Ithaca, N. Y..... 259–272 E 1

On a fundamental property of a minimum in the calculus of variations and the proof of a theorem of Weierstrass's. By W. F. OSGOOD, of Cambridge, Mass..... 273–295 D 7

Concerning Harnack's theory of improper definite integrals. By ELIAKIM HASTINGS MOORE, of Chicago, Ill..... 296–330 D 1

Zur linearen Transformation der θ-Reihen. By F. MERTENS, of Vienna, Austria ..... 331–342 D 3

VOLUME 2, NUMBER 4. OCTOBER, 1901.

Geometry of a simultaneous system of two linear homogeneous differential equations of the second order. By E. J. WILCZYNSKI, of Berkeley, Cal..... 343–362 F 4

Theory of linear groups in an arbitrary field. By LEONARD EUGENE DICKSON, of Chicago, Ill..... 363–394 E 2

On certain aggregates of determinant minors. By W. H. METZLER, of Syracuse, N. Y ..... 395–403 B 1

Ueber die Anwendung der Cauchy'schen Multiplicationsregel auf bedingt convergente oder divergente Reihen. By A. PRINGSHEIM, of Munich, Germany 404–412 D1
Ueber den Goursat'schen Beweis des Cauchy'schen Integralsatzes. By A. PRINGSHEIM, of Munich, Germany. 413–421 D2
New proof of a theorem of Osgood's in the calculus of variations. By O. BOLZA, of Chicago, Ill..... 422–427 D7
On certain pairs of transcendental functions whose roots separate each other. By MAXIME BÔCHER, of Cambridge, Mass. 428–436 D4
On the system of a binary cubic and quadratic and the reduction of hyperelliptic integrals of genus two to elliptic integrals by a transformation of the fourth order. By J. H. MCDONALD, of Lafayette, Ind..... 437–458 D3, B2
On the theory of improper definite integrals. By ELIAKIM HASTINGS MOORE, of Chicago, Ill..... 459–475 D1
On the convergence and character of the continued fraction $\frac{a_1 z}{1} + \frac{a_2 z}{1} + \frac{a_3 z}{1} + \cdots$. By E. B. VAN VLECK, of Middletown, Conn..... 476–483 D2
Notes and errata: volumes 1 and 2..... 484–487

VOLUME 3, NUMBER 1. JANUARY, 1902.

On a class of automorphic functions. By J. I. HUTCHINSON, of Ithaca, N. Y. 1– 11 D3
Concerning the existence of surfaces capable of conformal representation upon the plane in such a manner that geodetic lines are represented by a prescribed system of curves. By HENRY FREEMAN STECKER, of Ithaca, N. Y..... 12– 22 F4
Zur Erklärung der Bogenlänge und des Inhaltes einer krummen Fläche. By O. STOLZ, of Innsbruck, Austria..... 23– 37 D1
The groups of Steiner in problems of contact. By LEONARD EUGENE DICKSON, of Chicago, Ill..... 38– 45 E2
Quaternion space. By A. S. HATHAWAY, of Terre Haute, Ind. 46– 59 F1
Reciprocal systems of linear differential equations. By E. J. WILCZYNSKI, of Berkeley, Cal..... 60– 70 F4
On the invariants of quadratic differential forms. By CHARLES NELSON HASKINS, of New Bedford, Mass.... 71– 91 D6
On the nature and use of the functions employed in the recognition of quadratic residues. By E. MCCLINTOCK, of New York, N. Y... ..... 92–109 C1

A determination of the number of real and imaginary roots of the hypergeometric series. By EDWARD B. VAN VLECK, of Middletown, Conn. ..... 110–131 D 3

The second variation of a definite integral when one end-point is variable. By G. A. BLISS, of Minneapolis, Minn. ..... 132–141 D 7

On the projective axioms of geometry. By ELIAKIM HASTINGS MOORE, of Chicago, Ill. ..... 142–158 A, F 1

VOLUME 3, NUMBER 2. APRIL, 1902.

On the small divisors in the lunar theory. By E. W. BROWN, of Haverford, Pa. ..... 159–185 G 2

On the holomorphisms of a group. By J. W. YOUNG, of Ithaca, N. Y. ..... 186–191 E 1

A simple non-desarguesian plane geometry. By FOREST RAY MOULTON, of Chicago, Ill. ..... 192–195 A, F 1

On the real solutions of systems of two homogeneous linear differential equations of the first order. By MAXIME BÔCHER, of Cambridge, Mass. ..... 196–215 D 4

On a recent method for dealing with the intersections of plane curves. By C. A. SCOTT, of Bryn Mawr, Pa. .... 216–263 F 2

A complete set of postulates for the theory of absolute continuous magnitude. By E. V. HUNTINGTON, of Cambridge, Mass. ..... 264–279 A, D 1

Complete sets of postulates for the theories of positive integral and of positive rational numbers. By E. V. HUNTINGTON, of Cambridge, Mass. ..... 280–284 A C

VOLUME 3, NUMBER 3. JULY, 1902.

On the group defined for any given field by the multiplication table of any given finite group. By LEONARD EUGENE DICKSON, of Chicago, Ill. ..... 285–301 E 2

Nachtrag zum Artikel: „Zur Erklärung der Bogenlänge, u. s. w." (dieses Bandes, S. 23 f.). By O. STOLZ, of Innsbruck, Austria. ..... 302–304 D 1

Proof of the sufficiency of Jacobi's condition for a permanent sign of the second variation in the so-called isoperimetric problems. By O. BOLZA, of Chicago, Ill. ... 305–311 D 7

On hypercomplex number systems. By H. E. HAWKES, of New Haven, Conn. ..... 312–330 B 3

On metabelian groups. By W. B. FITE, of Ithaca, N. Y. .. 331–353 E 1

Conjugate rectilinear congruences. By L. P. EISENHART, of Princeton, N. J. ..... 354–371 F 4

Constructive theory of the unicursal cubic by synthetic methods. By D. N. LEHMER, of Berkeley, Cal. ..... 372–376 F 1

The groups of Steiner in problems of contact (second paper). By LEONARD EUGENE DICKSON, of Chicago, Ill... 377–382 E 2

VOLUME 3, NUMBER 4. OCTOBER, 1902.

On the groups of order p^m which contain operators of order p^{m-2}. By G. A. MILLER, of Stanford University, Cal. 383–387 E 1

On the circuits of plane curves. By C. A. SCOTT, of Bryn Mawr, Pa. 388–398 F 2

Note on the real inflexions of plane curves. By C. A. SCOTT, of Bryn Mawr, Pa. 399–400 F 2

La théorie des plaques élastiques planes. By J. HADAMARD, of Paris, France 401–422 G 3

Covariants of systems of linear differential equations and applications to the theory of ruled surfaces. By E. J. WILCZYNSKI, of Berkeley, Cal. 423–450 D 4, F 4

On the rank, order and class of algebraic minimum curves. By ARTHUR SULLIVAN GALE, of New Haven, Conn... 451–466 F 2

On the determination of the distance between two points in space of n dimensions. By H. F. BLICHFELDT, of Stanford University, Cal. 467–481 A, F 1

On superosculating quadric surfaces. By HEINRICH MASCHKE, of Chicago, Ill. 482–484 F 4

A definition of abstract groups. By ELIAKIM HASTINGS MOORE, of Chicago, Ill. 485–492 A, E 1

Algebraic transformations of a complex variable realized by linkages. By ARNOLD EMCH, of Boulder, Col.... 493–498 D 2, F 5

Notes and errata: volumes 1, 2, 3 499–501

VOLUME 4, NUMBER 1. JANUARY, 1903.

Orthocentric properties of the plane n-line. By FRANK MORLEY, of Baltimore, Md. 1– 12 F 2

Definitions of a field by independent postulates. By L. E. DICKSON, of Chicago, Ill 13– 20 A, B 3

Definitions of a linear associative algebra by independent postulates. By L. E. DICKSON, of Chicago, Ill. 21– 26 A, B 3

Two definitions of an abelian group by sets of independent postulates. By E. V. HUNTINGTON, of Cambridge, Mass 27– 30 A, E 1

Definitions of a field by sets of independent postulates. By E. V. HUNTINGTON, of Cambridge, Mass. 31– 37 A, B 3

On the invariants of differential forms of degree higher than two. By C. N. HASKINS, of Boston, Mass 38– 43 D 6

Über die Reducibilität der Gruppen linearer homogener Substitutionen. By A. LOEWY, of Freiburg, i. B., Germany 44– 64 E 2

The quartic curve as related to conics. By A. B. COBLE, of Columbia, Mo..... 65– 85 F 2
The cogredient and digredient theories of multiple binary forms. By E. KASNER, of New York, N. Y..... 86–102 B 2
On the envelope of the axes of a system of conics passing through three fixed points. By R. E. ALLARDICE, of Stanford University, Cal..... 103–106 F 2
A Jordan curve of positive area. By W. F. OSGOOD, of Cambridge, Mass ..... 107–112 D 1

VOLUME 4, NUMBER 2. APRIL, 1903.

The approximate determination of the form of Maclaurin's spheroid. By G. H. DARWIN, of Cambridge, England.. 113–133 G 3
On twisted cubic curves that have a directrix. By H. S. WHITE, of Evanston, Ill..... 134–141 F 2
Ueber Curvenintegrale im m-dimensionalen Raum. By L. HEFFTER, of Bonn, Germany..... 142–148 D 1
The generalized Beltrami problem concerning geodesic representation. By E. KASNER, of New York, N. Y.. 149–152 F 4
On the holomorph of a cyclic group. By G. A. MILLER, of Stanford University, Cal ..... 153–160 E 1
Quadric surfaces in hyperbolic space. By J. L. COOLIDGE, of Cambridge, Mass..... 161–170 F 1
Uber die Reducibilität der reellen Gruppen linearer homogener Substitutionen. By A. LOEWY, of Freiburg, i. B., Germany..... 171–177 E 2
On the possibility of differentiating term by term the developments for an arbitrary function of one real variable in terms of Bessel functions. By W. B. FORD, of Ann Arbor, Mich..... 178–184 D 3
On a certain congruence associated with a given ruled surface. By E. J. WILCZYNSKI, of Berkeley, Cal..... 185–200 F 4
On the class number of the cyclotomic number field $k(e^{2\pi i/p^n})$. By J. WESTLUND, of Lafayette, Ind..... 201–212 C 1

VOLUME 4, NUMBER 3. JULY, 1903.

On the point-line as element of space: a study of the corresponding bilinear connex. By E. KASNER, of New York, N. Y. ..... 213–233 F 3
On the formation of the derivatives of the lunar coordinates with respect to the elements. By E. W. BROWN, of Haverford, Pa ..... 234–248 G 2
On reducible groups. By S. EPSTEEN, of Chicago, Ill..... 249–250 E 2
Theory of linear associative algebra. By J. B. SHAW, of Gambier, Ohio .. .. 251–287 B 3

Projective coordinates. By FRANK MORLEY, of Baltimore, Md. . . . . 288–296 F 1
On an extension of the 1894 memoir of Stieltjes. By E. B. VAN VLECK, of Middletown, Conn. . . . . 297–332 D 2
On the variation of the arbitrary and given constants in dynamical equations. By E. W. BROWN, of Haverford, Pa. . . . . 333–350 G 1, G 2
The primitive groups of class $2p$ which contain a substitution of order p and degree $2p$. By W. A. MANNING, of Berkeley, Cal. . . . . 351–357 E 1
Complete sets of postulates for the theory of real quantities. By E. V. HUNTINGTON, of Cambridge, Mass. . . . 358–370 A, D 1

VOLUME 4, NUMBER 4. OCTOBER, 1903.

On the subgroups of order a power of p in the quaternary abelian group in the Galois field of order p^n. By L. E. DICKSON, of Chicago, Ill. . . . . 371–386 E 2
On the order of linear homogeneous groups. By H. F. BLICHFELDT, of Stanford University, Cal. . . . . 387–397 E 2
Non-abelian groups in which every subgroup is abelian. by G. A. MILLER and H. C. MORENO, of Stanford University, Cal. . . . . 398–404 E 1
On nilpotent algebras. By J. B. SHAW, of Decatur, Ill. . . . 405–422 B 3
On solutions of differential equations which possess an oscillation theorem. By HELEN A. MERRILL, of New Haven, Conn. . . . . 423–433 D 4
On the reducibility of linear groups. By L. E. DICKSON, of Chicago, Ill. . . . . 434–436 E 2
Semireducible hypercomplex number systems. By S. EPSTEEN, of Chicago, Ill . . . . . 437–444 B 3
A symbolic treatment of the theory of invariants of quadratic differential quantics of n variables. By H. MASCHKE, of Chicago, Ill. . . . . 445–469 D 6
Congruences of curves. By L. P. EISENHART, of Princeton, N. J. . . . . 470–488 F 4
Similar conics through three points. By T. J. I'A. BROMWICH, of Galway, Ireland . . . . . 489–492 F 2

VOLUME 5, NUMBER 1. JANUARY, 1904.

The subgroups of order a power of 2 of the simple quinary orthogonal group in the Galois field of order $p^n = 8l \pm 3$. By LEONARD EUGENE DICKSON, of Chicago, Ill . . . . . 1– 38 E 2
On certain invariants of two triangles. By JOHN GALE HUN, of Princeton, N. J. . . . . 39– 55 F 2

Isothermal systems of geodesics. By EDWARD KASNER, of New York, N. Y..... 56– 60 F 4
Zur Gruppentheorie mit Anwendungen auf die Theorie der linearen homogenen Differentialgleichungen. By ALFRED LOEWY, of Freiburg i. B., Germany..... 61– 80 E 2, D 4
On the group of sign (0, 3 ; 2, 4, ∞) and the functions belonging to it. By JOHN WESLEY YOUNG, of Ithaca, N. Y..... 81–104 D 3
On the definition of reducible hypercomplex number systems. By SAUL EPSTEEN, of Chicago, Ill..... 105–109 B 3
A simple proof of a theorem in the calculus of variations. By E. GOURSAT, of Paris, France..... 110–112 D 7

VOLUME 5, NUMBER 2. APRIL, 1904.

An existence theorem for a differential equation of the second order, with an application to the calculus of variations. By GILBERT AMES BLISS, of Chicago, Ill. 113–125 D 4, D 7
Determination of all the subgroups of the known simple group of order 25920. By LEONARD EUGENE DICKSON, Chicago, Ill..... 126–166 E 1
On the invariants of quadratic differential forms, II. By CHARLES NELSON HASKINS, of New Bedford, Mass ..... 167–192 D 6
On the coefficients in the product of an alternant and a symmetric function. By E. D. ROE, JR., of Syracuse, N. Y..... 193–213 B 1
The groups of order p^5q^2. By F. N. COLE, of New York, N. Y..... 214–219 E 1
Green's theorem and Green's functions for certain systems of differential equations. By MAX MASON, of Boston, Mass..... 220–225 D 5
Studies in the general theory of ruled surfaces. By E. J. WILCZYNSKI, of Berkeley, Cal..... 226–252 F 4

VOLUME 5, NUMBER 3. JULY, 1904.

On the convergence of algebraic continued fractions whose coefficients have limiting values. By EDWARD B. VAN VLECK, of Middletown, Conn..... 253–262 D 2
The Sylow subgroups of the symmetric group. By WILLIAM FINDLAY, of New York, N. Y..... 263–278 E 1
On the smaller perturbations of the lunar arguments. By ERNEST WILLIAM BROWN, of Haverford, Pa..... 279–287 G 2
Sets of independent postulates for the algebra of logic. By EDWARD V. HUNTINGTON, of Cambridge, Mass..... 288–309 A, B 3
On the order of linear homogenous group (second paper.) By H. F. BLICHFELDT, of Standford University, Cal..... 310–325 E 2

Algebras defined by finite groups. By JAMES BYRNIE SHAW, of Decatur, Ill..... 326–342 B 3, E
A system of axioms for geometry. By OSWALD VEBLEN, of Chicago, Ill..... 343–384 A, F 1

VOLUME 5, NUMBER 4. OCTOBER, 1904.

On a method of dealing with the intersections of plane curves. By F. S. MACAULAY, of London, England... 385–410 F 2
On certain complete systems of quaternion expressions, and on the removal of metric limitations from the calculus of quaternions. By J. M. PEIRCE, of Cambridge, Mass..... 411–420 B 3, F 1
Three particular systems of lines on a surface. By L. P. EISENHART, of Princeton, N. J..... 421–437 F 4
On ruled surfaces whose flecnode curve intersects every generator in two coincident points. By E. J. WILCZYNSKI, of Berkeley, Cal..... 438–446 F 4
On the automorphic functions of the group (0, 3 ; 2, 6, 6). By J. I. HUTCHINSON, of Ithaca, N. Y..... 447–460 D 3
A theorem concerning the invariants of linear homogeneous groups, with some applications to substitution groups. By H. F. BLICHFELDT, of Berkeley, Cal..... 461–466 E 2
On the geometry whose element is the 3 point of a plane. By F. MORLEY, of Baltimore, Md..... 467–476 F 2, F 3
Sufficient conditions for a minimum with respect to one-sided variations. By G. A. BLISS, of Columbia, Mo.. 477–492 D 7
Sur les opérations linéaires. By M. FRECHET, of Paris, France..... 493–499 D 1
On groups in which certain commutative operations are conjugate. By H. L. RIETZ, of Urbana, Ill ..... 500–508 E 1
On hypercomplex number systems (first paper). By H. TABER, of Worcester, Mass..... 509–548 B 3
Notes and Errata : Volumes 1, 3, 4, 5.. 549–552
